SAFETY PRECAUTION

The following precautions should be observed when servicing.

1. **Since many parts in the unit have special safety related characteristics, always use genuine Hitachi's replacement parts. Especially critical parts in the power circuit block should not be replaced with other makes. Critical parts are marked with ⚠ in the schematic diagram and circuit board diagram.**
2. **Before returning a repaired unit to the customer, the service technician must thoroughly test the unit to ascertain that it is completely safe to operate without danger of electrical shock.**

IC PIN FUNCTION TABLE

1. IC401 (HD44801A41 for mechanism/ATRS control)

<table>
<tr><th>Pin No.</th><th>Pin Symbol</th><th>Function</th></tr>
<tr><td>1</td><td>BIAS</td><td>• Control output pin to operate the bias oscillation circuit. Outputs Lo potential normally and Hi potential in the REC mode and the REC-PAUSE mode. Outputs after elapse of the inhibit time of 120 ms when the mode is changed from STOP, PLAY or PAUSE, and outputs after elapse of the inhibit time of 820 ms when the mode is changed from FF or REW. Outputs after elapse of the inhibit time of 180 ms when the mode is changed from STOP to REC-PAUSE.</td></tr>
<tr><td>2
3</td><td>TAPE SELECT 1
TAPE SELECT 2</td><td>• Tape select switch (S2) position detection input pin. Detects the tape select switch position according to the truth table shown below and changes over the output data.
<table>
<tr><th>Switch position / Input pins</th><th>NORMAL</th><th>FeCr</th><th>CrO2</th><th>METAL</th></tr>
<tr><td>Pin ②</td><td>0</td><td>1</td><td>0</td><td>1</td></tr>
<tr><td>Pin ③</td><td>0</td><td>0</td><td>1</td><td>1</td></tr>
</table></td></tr>
<tr><td>4</td><td>$\overline{\text{TEST START}}$</td><td>• ATRS test start detection input pin. Inputs Hi potential normally and inputs Lo potential by the button operation in the REC, REC-PAUSE or REC-HOLD mode, to detect the ATRS test start. The ATRS test starts actually when the input is detected during the REC or REC-PAUSE mode.
• Outputs Lo potential when executing the ATRS test and outputs Hi potential normally.</td></tr>
<tr><td>5</td><td>TEST INDI.</td><td>• Test indicator drive output pin. Outputs Lo potential normally and outputs the flashing pulse with 1.28 sec. period when executing the ATRS test. When error occurs during the ATRS test, the flashing pulse with 160 ms period is output as error indication.
This error indication continues until the play button or pause button key input is given.
 </td></tr>
<tr><td>6</td><td>AF OSC
(1 kHz/$\overline{14\text{ kHz}}$)</td><td>• AF signal oscillator control output pin. Outputs Hi potential until ATRS test starts when power is ON. Outputs Hi potential when recording the 1 kHz signal and Lo potential when recording the 14 kHz signal during execution of the ATRS test. It is set to the Lo potential output mode after ATRS test is completed.</td></tr>
<tr><td>7</td><td>A/D COMP.</td><td>• A/D comparator output input pin.
Detects the inversion output (fall signal from Hi to Lo potential) of the A/D comparator during execution of the ATRS test.</td></tr>
<tr><td>8</td><td>A/D RESET</td><td>• A/D comparator circuit reset control output pin.
Outputs Lo potential in other modes than the ATRS operation, and outputs Hi potential with 80 ms width just after scanning the A/D comparison reference voltage during execution of the ATRS test to reset the test sample hold, and outputs Hi potential for approx. 3 sec. after power is supplied.</td></tr>

When Hi potential is output : R channel
When Lo potential is output : L channel</td></tr>
</table>

Pin No.	Pin Symbol	Function
10	$\overline{\text{LINE MUTE}}$	• LINE amp final stage muting control output pin. Outputs Hi potential during REC, PLAY and REC-PAUSE after recording to mute the play signal of the LINE amp output. Hi potential is output after elapse of the inhibit time of 120 ms during play, after elapse of the inhibit time of 400 ms during record and after elapse of the inhibit time of 1100 ms when changing the mode from FF or REW.
11	REW SOL.	• REW solenoid drive output pin. Outputs Lo potential normally and outputs Hi potential during REC, PLAY and REW.
12	FF SOL.	• FF solenoid drive output pin. Outputs Lo potential normally and outputs Hi potential during REC, PLAY and FF.
13	PAUSE SOL.	• PAUSE solenoid drive output pin. Outputs Lo potential normally and outputs Hi potential during REC-PAUSE mode and PLAY–PAUSE mode.
14	NC	• Blank pin.
15	RESET	• Initial reset input pin. This pin input is set to Hi potential when power is supplied to perform initial resetting.
16	GND	• Connected to GND.
