Precautions when performing repairs.

(1) If you want to power on X-B3 without A-B3 need power supply jig (RM-90PS). Power-on procedure is written on page 20 (USE TEST MODE).

(2) Do not look directly at the lasler beam while repairing the CD Player.

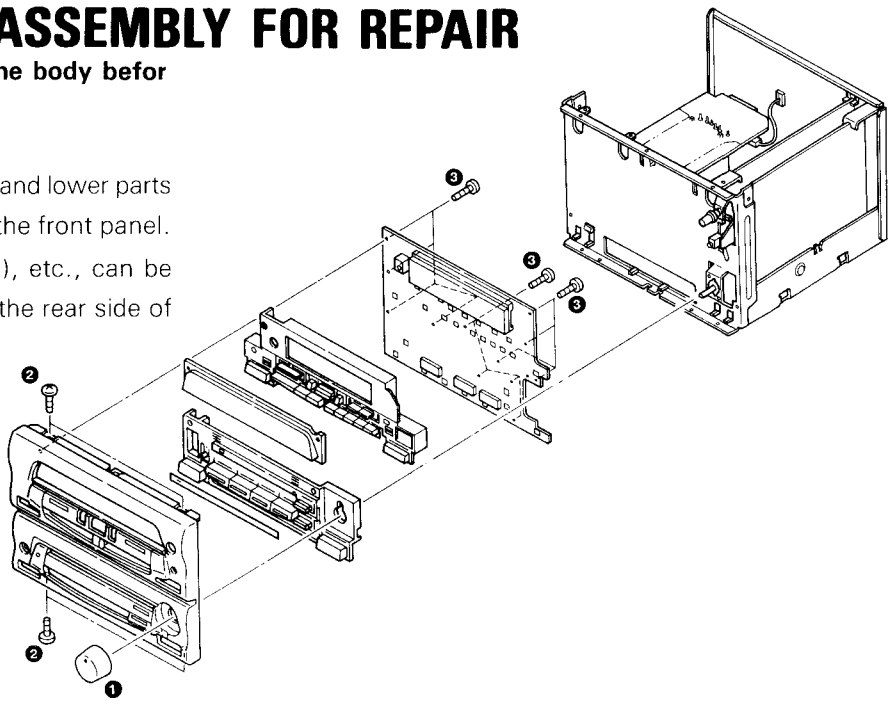
DISASSEMBLY FOR REPAIR

***Remove the metallic cabinet from the body befor ehand.**

(1) Remove the knob ❶.

(2) Remove the 4 screws ❷ of the upper and lower parts of the front panel, and then remove the front panel.

(3) The printed circuit boards (X05-A/3), etc., can be removed when the 12 screws ❸ at the rear side of the front panel are removed.



(4) Remove the MIC knob ❶

(5) Remove the screw ❷, and then remove the bracket attached to the front sub-panel.
Remove the 6 screws ❸, and then remove the front sub-panel.
Remove the screw ❹, and then remove the bracket attached to the rear panel.
Pull out the printed circuit boards (X05-B/3) and (X09-B/3) in the direction of the arrow.

(6) Remove the 8 screws ❺, and then remove the rear panel.
Removed the 6 screws ❻, and the remove the printed circuit board (X09-A/3).

(7) Since the bottom plate can be removed when the screw bearing the mark ○ in the figure is removed after removing the front panel, the pattern face of the printed circuit board of the lower side can be checked as well.

TEST MODE

(1) Plug the AC cord in the electrical outlet while pressing the CD key. (MEMORY RESET)

(2) The TEST MODE is cancelled when the AC power cord is disconnected from the electrial outlet.

(3) a: ALL FL light up. (The display switches to NOR when any KEY is pressed).

b: The VR moves UP-DOWN when the TAPE KEY is pressed.

c: The NOR→ bar indication is inverted and the various segments of the DISP indication flicker successively when the DISP KEY is pressed.

d: The status of M1 to M5 change as follows:

M1, M5	0 dB
M2	+12 dB
M3	−12 dB

(NOTE) MEMORY is RESET by TEST MODE.

DISASSEMBLY FOR REPAIR

***Remove the metallic cabinet from the body beforehand.**

(1) Open the cassette holder by pushing the eject button. Then, remove the front glass by pushing the hook ❶ located inside the cassette holder by means of a square-bard standard screwdriver and the like.

(2) If the tray doesn't come out even when the power is turned ON, slide the lever located in side the CD mechanism with a slender screwdriver, a piece of wire, etc., from the left-hand side of the front panel ❷.
When the CD tray panel of the fornt panel comes out, pull the tray out and then remove the tray panel ❸. (X-B3 only)

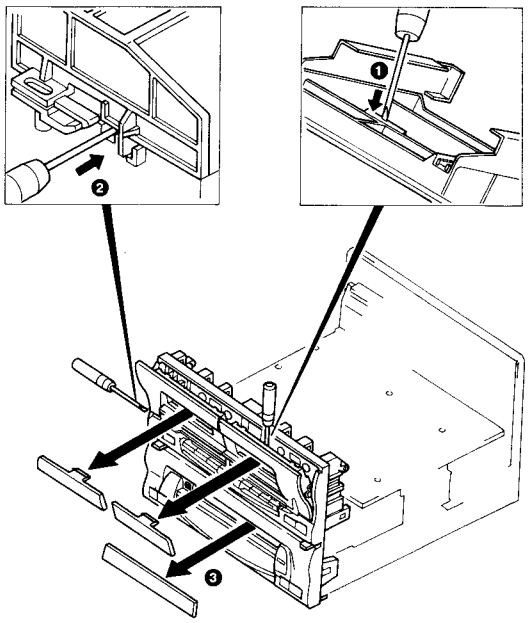
(3) Disconnect the flat cable.

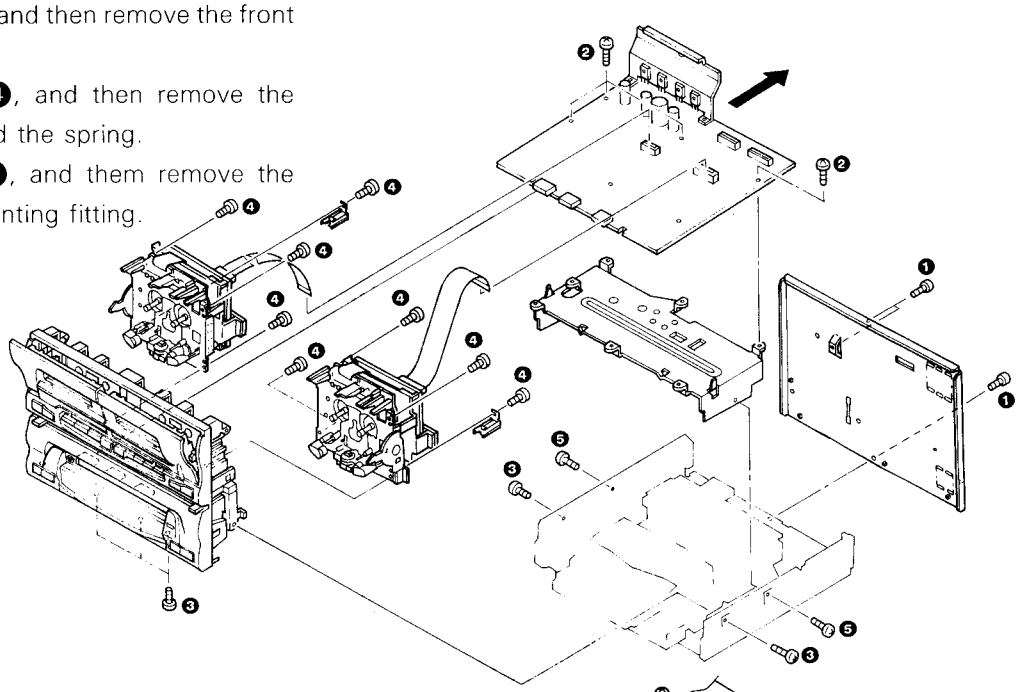
(4) Remove the 4 screws ❶, and then remove the rar panel.
Remove the 4 screws ❷, pull the deck printed circuit board in the arrow direction, and then disconnect the connector from the front printed circuit board.

(5) Remove the 6 screws ❸, and then remove the front panel.

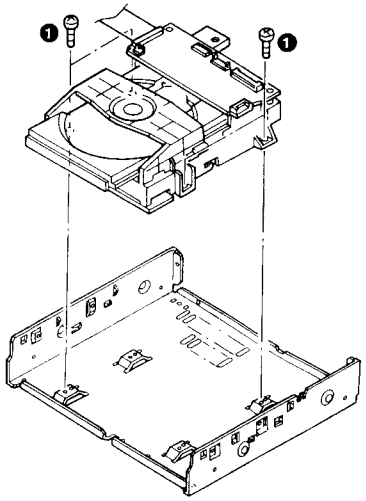
(6) Remove the 8 screws ❹, and then remove the mechanism main unit and the spring.

(7) Remove the 2 screws ❺, and them remove the printed circuit board mounting fitting.





(8) The CD mechanism can be removed when the 4 screws ❶ are removed.



(Note 1)
Refer to DP-A5/A9 for the mechanism disassembling method.
(Note 2)
REPAIRING THE CD UNIT
The FL indication goes out when the rear panel and the cassette printed circuit board (X29-) are removed, but the operation of the CD can be checked notwithstanding.

CIRCUIT DESCRIPTION

TEST MODE

PRESETTING METHOD

- Turn the power ON while pressing the FWD PLAY (▶) key.
- Ground TP3 of TEST 1, and turn the power ON.
  At this time, CD is also switched to the test mode by the serial code (DO11).

FUNCTIONS

(1) Four-second REC (Operation by means of REC key)
  ① The REC operation with 4-second duration (Including mechanism switching time) at the current head direction of DECK B is started. The tape count is reset for the tape to return to the beginning of the recording.
  ② After finishing the REC operation with 4-second duration, the tape is rewound at double speed for the tape count to return to zero.
  ③ The tape is played back. (The operation is not interrupted).

(2) Thirteen-second REC (Operation by means of the CCRS key)
  ① The REC operation with 13-second duration (Including mechanism switching time. Dolby is set to B) at the current head direction of DECK B is started. The tape count is zeroed.
  ② The tape is rewound when the REC operation with 14-second duration is finished.
  ③ The tape is played back whe it is rewound back to the REC starting position. (The operation is not interrupted).
  ④ The operation stops with the DOLBY noise reduction OFF when the STOP key is pressed.

(3) SWITCHING THE SPEED
  The tape runs with double speed when the FF key is pressed during FWD PLAY, and returns to the ordinary speed when theh FWD PLAY key is pressed.

(4) Lighting all FL up
  All FL are lit up apoproximately 0.5 second after turning the power ON in TEST1.
  All FL stay lit up for approxoimately 2 seconds, and after that they change to the special indication state for TEST.

(5) INDICATIOLNS OF FL
  The reel pulse is detected, adn (A) flickers at the DECK A, and (B) flickers at DECK B.
  The recording tab of the half is detected, and the ◀▶ indication appears in the recordable direction. (Only DECK B).

(6) OTHERS
  ① The initial values are forcibly preset in the back-up area when POWER is turned ON with the STOP key kept pressed.
  ② The initial value of the line-out selector becomes CD when POWER is turned ON with the REC key kept pressed. (Usually, the initial value is DECK).
  ③ The initial values are forcibly preset in the back-up area when POWER is turned ON for the first time right after finishing TEST 1 and TEST 2.
  ④ The rise-up time is made as short as possible, as long as there is no influence ON the other operations.
  The operation of the keys is enabled when the initialization of the mechanism is finished. (It takes about 2 to 3 seconds to initialize the mechanism).

TEST MODE

* There are 2 methods to obtain the output of the CD when there is no A-B3.
  ① Turn the POWER ON while pressing the ⏮ KEY of the DECK.
  ② Ground the base of Q110 (X29-2390).

(1) SELECTING THE TEST MODE
Short-circuit the pins 1 and 2 of CN2 of X32-2250. Otherwise, if the DECK PCB is connected, turn the POWER ON while prossing the ▷ (RWD PLAY) key for both DECK and CD to switch to the test mode.

(2) FUNCTIONS OF THE KEYS ENABLED IN THE TEST MODE

	Key name	Function	Indication
1	PLAY	Focous servo .....ON Tracking servo .....ON Feed servo .....ON	05
2	PLAY (keep KEY pressed)	Focus servo.....ON Tracking servo .....OFF Feed servo .....OFF	05→01→04
3	STOP	Servo .....OFF	01
4	⏭ UP	All FL light up	
5	⏮ DOWN	All FL light OFF	Anything besides track NO.

NOTE: Since the DECK PCB (X29-2390A/2) and the display PCB (B/2) are disconnected when checking the operation in the test mode, make sure of installing these PCB once again if FL check is required.

DISASSEMBLY FOR REPAIR

***Remove the metallic cabinet from the body beforehand.**

(1) Open the cassette holder by pushing the eject button. Then remove the lid by pushing the hook ❶ located inside the cassette holder by means of a square-bar standard a screwdriver and the like.

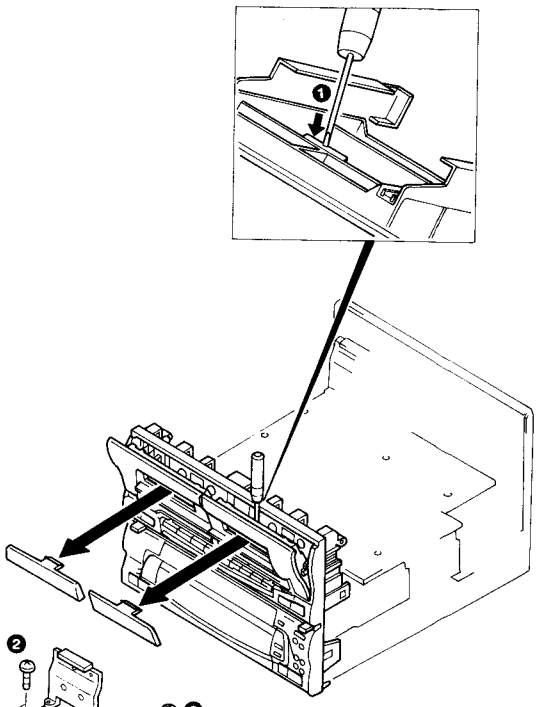
(2) Disconnect the flat cable.

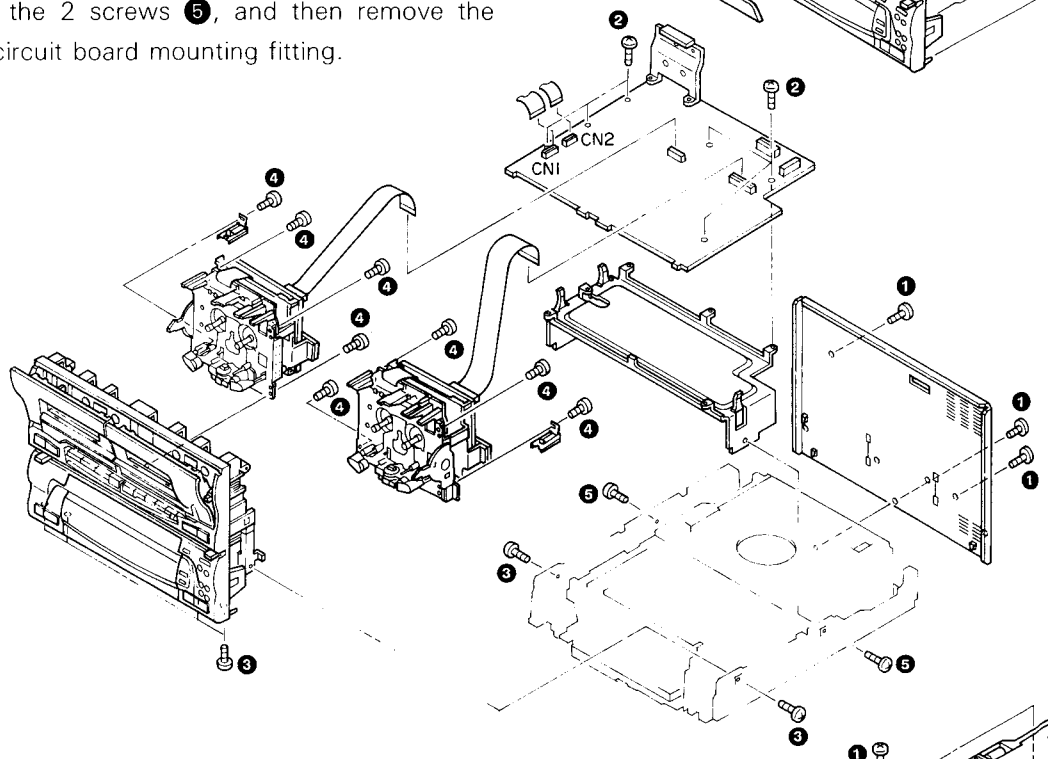
(3) Remove the screws ❶, and then remove the rear panel.
Remove CN1, CN2 and the 6 screws ❷, and then remove the printed circuit board.

(4) Remove the 6 screws ❸, and then remove the front panel.

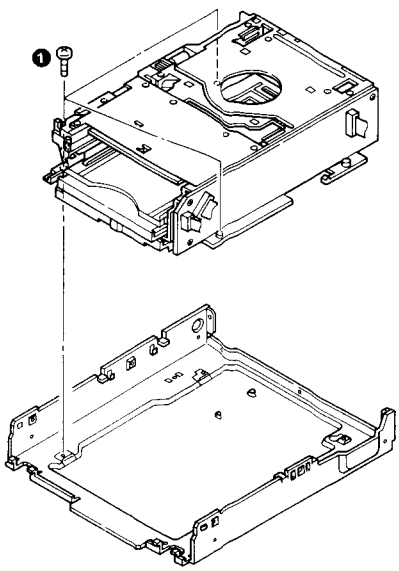
(5) Remove the 8 screws ❹, and then remove the mechanism main unit and the spring.

(6) Remove the 2 screws ❺, and then remove the printed circuit board mounting fitting.





(7) The CD mechanism can be removed when the 3 screws ❶ are removed.



(Note 1)
Refer to DP-MA5/MA9 for the method to disassemble the mechanism.

(Note 2)
The FL indication goes out when the rear panel and the cassette printed circuit board (X29-) are removed, but the opepration of the CD can be checked notwithstanding.

DC voltages are as measured with a high impedance voltmeter. Values may vary slightly due to variations between individual instruments or/and units.

Les tensions c.c. doivent être mesurees avec un voltmètre à haute impedance. Les valeurs peuvent differer légèrement du fait des variations inherentes aux appareils et aux instruments de mesure individuels.

Die angegebenen Gleichspannungswerte wurden mit einem hochohmigen Spannungsmesser gemessen. Dabei schwanken die Meßwerte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u. U.geringfügig.

CAUTION : For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). !. Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

DC voltages are as measured with a high impedance voltmeter with a cassette loaded at playback mode. Values may vary slightly due to variations between individual instruments or/and units. Bias circuit DC voltages are as measured while in the record mode.

Les tensions c.c. doivent être mesurées avec un voltmètre à haute impédance, une cassette étant insérée en mode du lecture. Les valeurs peuvent différer légèrement du fait des variations inhérentes aux appareils et aux instruments de mesure individuels.
Les tensions c.c. du circuit de polarité doivent être mesurées, l'appareil étant en mode d'enregistrement.

Die angegebenen Gleichspannungswerte wurden bei eingesetzter Cassette in der Wiedergabe mit einem hochomigen Spannungsmesser gemessen. Dabei schwanken die Meßwerte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u. U. geringfügig. Die angegebenen Gleichspannungswerte der Vormagnetisierungsschaltung wurden in der Aufnahme-Betriebsart gemessen.

CAUTION : For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list) ! Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is retumed to the customer.

SPECIFICATIONS

System	2-Way 2-Speaker System
Enclosure	Bass-Reflex, Bookshelf Type
Loudspeakers	
Woofer	120 mm (4-3/4 in) Cone Type
Tweeter	50 mm (2 in) Cone Type
Nominal Impedance	6 ohms
Maximum Input Power	60 Watts
Rated Input Power	30 Watts
Sensitivity	88 dB/W at 1 m
Frequency Response	50 Hz to 20,000 Hz
Crossover Frequency	5,000 Hz
Terminals	Push-Lever Type
Dimensions	Width: 190 mm (7-1/2 in) Height: 380 mm (14-15/16 in) Depth: 255 mm (10-1/16 in)
Net Weight	5.0 kg (11.0 lbs)
Enclosure Finish	High density particle board laminated with simulated wood grain vinyl.
Accessories	Speaker Wire

DISASSEMBLY FOR REPAIR

HOW TO REMOVE THE GRILLE ASS'Y

Insert the tip of ⊖ driver into the four ditches located on the upper and lower sides of the net and widen the space between the net and speaker.
In doing this, attach a cloth to the speaker cabinet so as not to damage it.
