Image rejection at 999kHz	40dB
IF rejection at 999kHz	55dB

■ GENERAL

Power consumption	440W
Power supply	AC 50Hz/60Hz, 220V
Dimensions (W × H × D)	430 × 102 × 290mm (16-15/16" × 4" × 11-1/4")
Weight	6.7kg (14.8lb.)

Notes:

1. Specifications are subject to change without notice. Weight and dimensions are approximate.
2. Total harmonic distortion is measured by the digital spectrum analyzer (H.P. 3045 system).

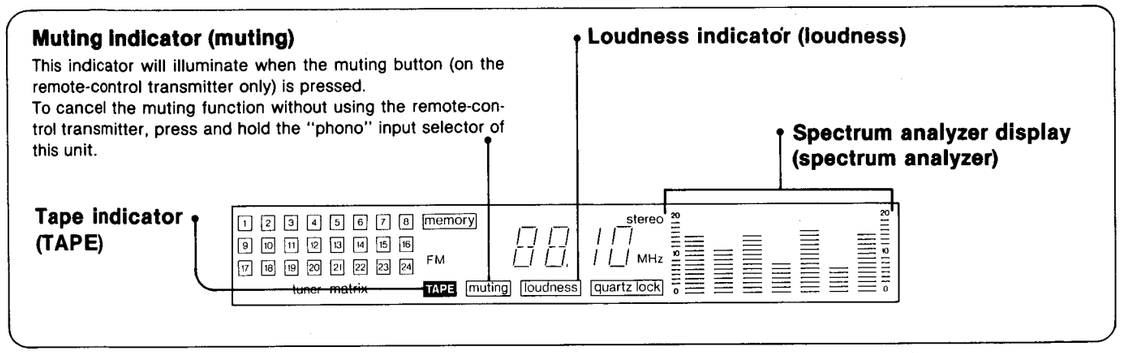
■ LOCATION OF CONTROLS

Amplifier section



Muting indicator (muting)
This indicator will illuminate when the muting button (on the remote-control transmitter only) is pressed.
To cancel the muting function without using the remote-control transmitter, press and hold the "phono" input selector of this unit.

Loudness indicator (loudness)

Spectrum analyzer display (spectrum analyzer)

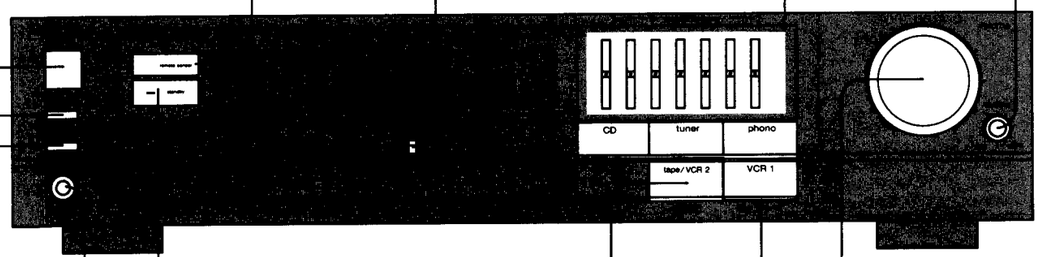
Tape indicator (TAPE)

Power "standby ⏻, on" switch (power "standby ⏻, on")
This switch switches ON and OFF the secondary circuit power only. The unit is in the "standby" condition when this switch is set to the "standby ⏻" position. Regardless of the switch setting, the primary circuit is always "live" as long as the power cord is connected to an electrical outlet.

Equalizer controls (graphic equalizer)
These controls are used to adjust the levels within each frequency band. The levels can be varied continuously over a range of +10 dB~−10 dB. By sliding the controls at each of the indicated frequencies in the "+" direction, the frequencies in that band are boosted, and by sliding them in the "−" direction, the frequencies in that band are attenuated.
When the power switch is set to the "on" position, the tips of these level controls will illuminate.

Remote-control signal sensor (remote sensor)

Loudness switch (loudness)
Set to the "on" position (The loudness indicator will illuminate.) when listening to music at low volume. Auditory perception of sound in the low frequency range falls off at low volume but when the switch is in this position, this deficiency is compensated for, so that the full impact of the musical performance can be enjoyed.



Balance control (balance)

"standby ⏻" indicator
This indicator will illuminate when the unit is switched to the standby condition by the power "standby ⏻/on" switch on the unit or the ON/OFF switch on the remote-control transmitter.

Headphones jack (phones)

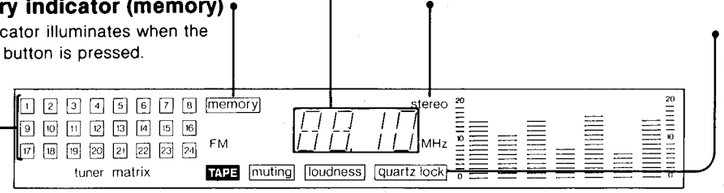
Speaker selectors (speakers)
These selectors are used to switch the speaker systems ON and OFF.

Tape-monitor switch (monitor)
Press this button to listen to tape.
No other sources selected by the input selector can be heard while the tape indicator is illuminated. To listen to some other source, press this button once again.

Volume-control/indicator (volume)
The indicator will move in accordance with the volume level.

Input selectors (input selector)
These selectors are used to select the sound source to be heard, such as a disc, radio broadcast, etc.
The selected sound is shown on the audio input selector/frequency display.

Tuner section



Audio input selector/frequency display (audio input selector/frequency)

FM stereo indicator (stereo)
This indicator automatically illuminates when an FM stereo broadcast is being received.
Note: It will not illuminate if the FM mode selector is pressed.

Memory indicator (memory)
This indicator illuminates when the memory button is pressed.

Quartz-lock indicator (quartz lock)
This indicator illuminates when tuned precisely to an FM or AM station.

Preset channel matrix display (tuner matrix)

FM mode selector (FM mode)
This unit automatically switches to the stereo mode when a stereo broadcast is received. Press this selector to listen in the monaural mode. The stereo indicator will not illuminate in the monaural mode.

Group select button (select)

Assort-mode select button (assort)

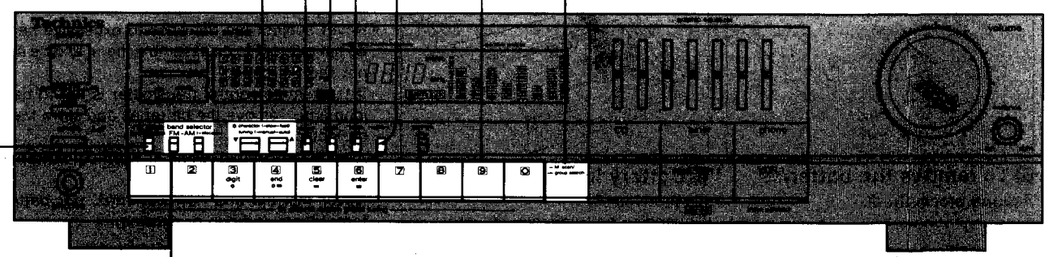
Change-mode select button (change)

Character-input/tuning buttons (character/tuning)

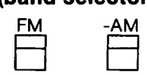
Memory button (memory)
This button is used when preset memory setting of the preset-tuning buttons is made.

Preset tuning buttons (1~0) (24 channel random preset tuning)
These buttons are used to preset FM and AM broadcast frequencies into the memory of this unit, and are also pressed to select the desired preset frequencies.
Note:
The buttons marked [3] ~ [6] are also used to listen to radio broadcasts arranged in convenient groups.

Memory-scan/group-search button (-M. scan/–group search)

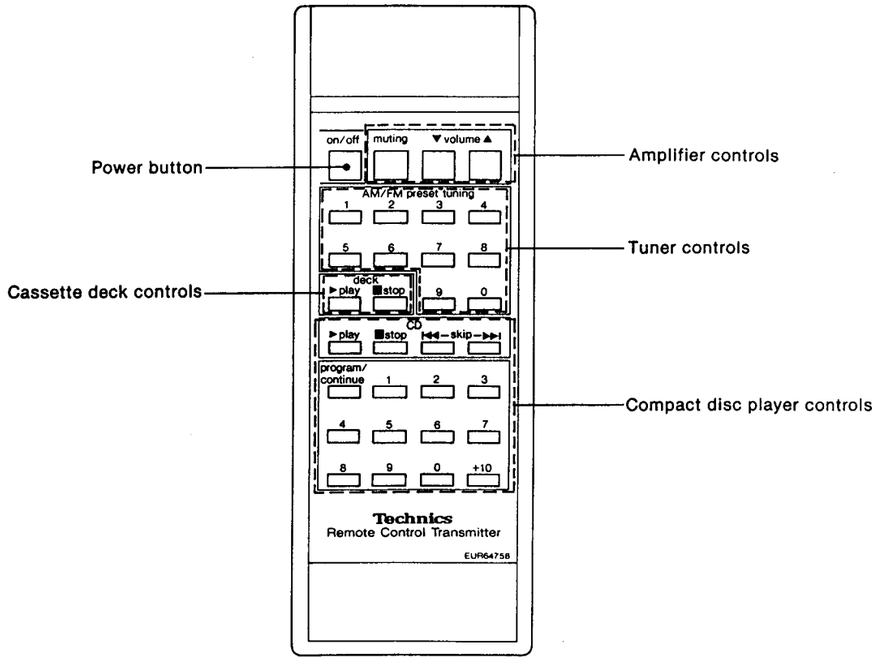


Band selectors (band selector)



FM: Press this button to listen to an FM broadcast.
AM: Press this button to listen to an AM broadcast.
allocation:
When the AM button is pressed for about 4 seconds, the AM frequency step will change to 10 kHz per step. (This step is set to 9 kHz before shipment.) In order to return to the original frequency indication, press this button for about 4 seconds again.

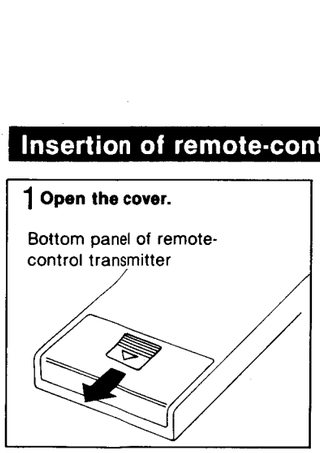
• **Remote-control transmitter (EUR64758)**



Insertion of remote-control transmitter batteries

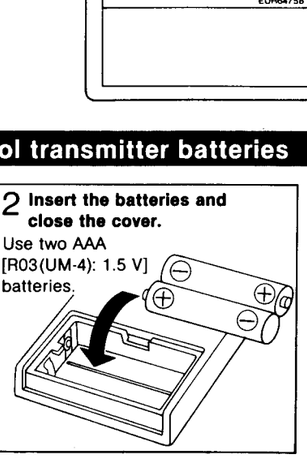
1 Open the cover.

Bottom panel of remote-control transmitter



2 Insert the batteries and close the cover.

Use two AAA [R03(UM-4): 1.5 V] batteries.



■To remove the batteries

Reverse procedure 2.

■Battery life

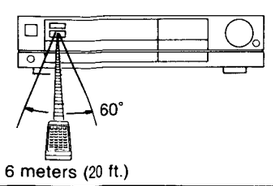
About 1 year.
(Depending on frequency of use.)

■Notes concerning use of dry batteries

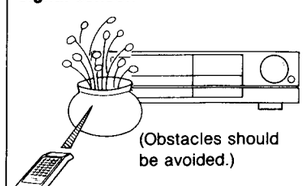
- Do not use chargeable batteries (Ni-Cd type).
- Be sure the batteries are inserted so that the positive (+) and negative (−) polarities are correct. Batteries installed with incorrect polarities may leak and damage the remote-control transmitter.
- Never subject the batteries to excessive heat or flame; do not attempt to disassemble them; and be sure they are not short-circuited.
- If the remote-control transmitter is not to be used for a long time, remove the batteries and store them in a cool dark place.
- Always remove old, weak or worn-out batteries promptly and dispose of them properly.
- Never mix old and new batteries, nor batteries of different types (carbon or alkaline).

Operation notes

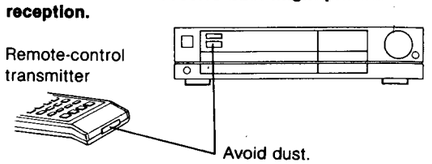
Use the remote-control transmitter within 6 meters.



Face it toward the remote-control signal sensor.



Be sure the transmitter part of the remote-control transmitter and the sensor part of this unit are free from dust. Excessive dust might prevent reception.



Notes: 1. The control panel of the remote-control transmitter may be covered by a clear plastic protective sheet. This sheet may be removed if desired.
2. If this unit is placed in an audio rack, the distance that the remote control transmitter can be used from might be reduced due to the thickness or color of the glass door.

D

■ CONNECTIONS

• **Connections to equipment**

"PHONO" terminals

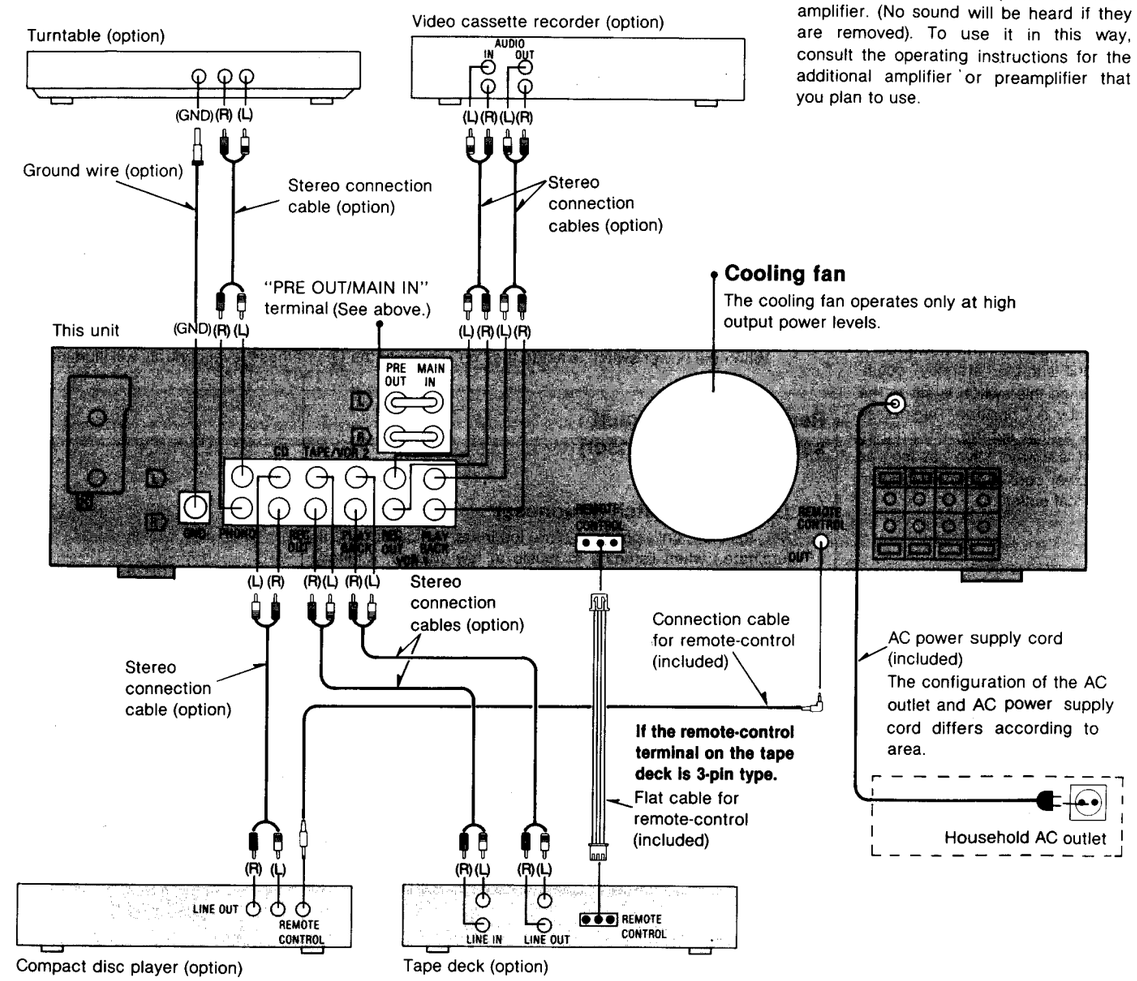
Connect a turntable.
Note:
For remote-control operation, be sure to connect the ground wire correctly.

"VCR 1" terminals

Connect a video cassette recorder or an audio tape deck etc. (Refer to the operating instructions of VCR, etc.)

"PRE OUT/MAIN IN" terminals

Do not remove the shorting pins from these terminals unless you plan to use an independent preamplifier or main amplifier. (No sound will be heard if they are removed). To use it in this way, consult the operating instructions for the additional amplifier or preamplifier that you plan to use.



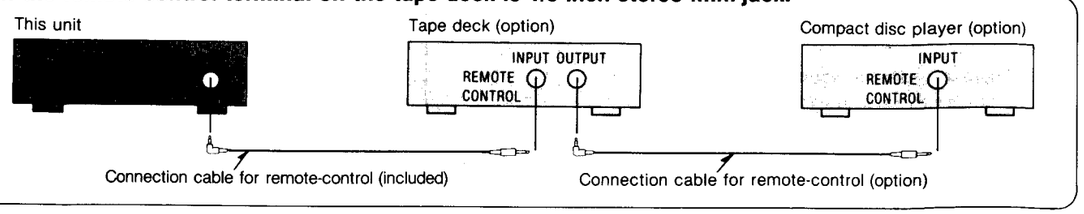
"CD" terminals

Connect a compact disc player.

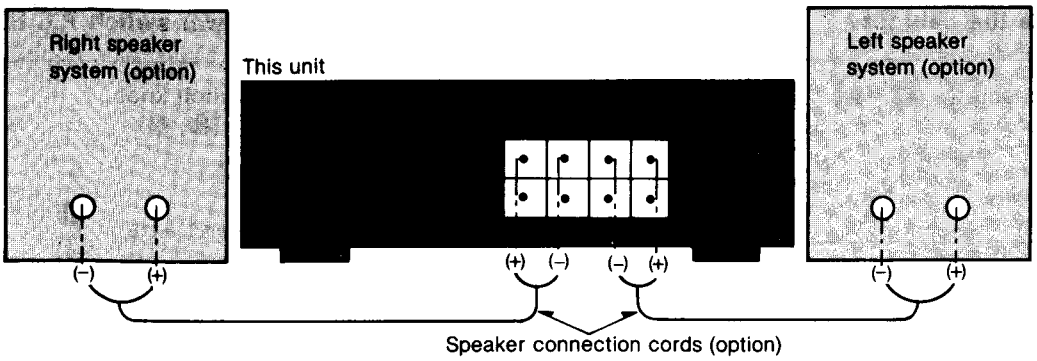
"TAPE/VCR 2" terminals

Connect a tape deck or second VCR.

If the remote control terminal on the tape deck is 1/8 inch stereo mini-jack.



• **Connections to speakers**

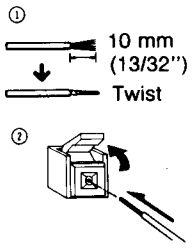


■Load impedance:
MAIN or REMOTE: 4~16 Ω
MAIN and REMOTE: 8~16 Ω

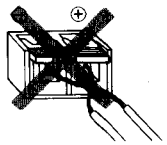
■"REMOTE" terminals
For connection to a second pair of speakers.

Connection of speaker wires

① Twist the core of the speaker wires.
② Lift up the lever, and insert the core until it can no longer be seen.
③ Press down the lever, and pull the cord gently to be sure that it is secure.



Notes:
1. To prevent damage to circuitry, never short-circuit positive (+) and negative (–) speaker terminals.
2. Be sure to only connect positive (+) cords to positive (+) terminals, and negative (–) cords to negative (–) terminals.
3. Connections of speaker wires should be made before connecting the AC power supply cords.



■ PROTECTION CIRCUITRY

The protection circuitry may have operated if either of the following conditions is noticed:
• No sound is heard when the power is turned on.
• Sound stops during a performance.
The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of the amplifier are used.

If this occurs, follow the procedure outlines below:
1. Turn off the power.
2. Determine the cause of the problem and correct it.
3. Turn on the power once again after one minute.

Note:
When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

■ BEFORE REPAIR AND ADJUSTMENT

1. Turn off the power, Discharge both power supply capacitors (C701, C702 8200μF) through a 10Ω 5W resistor to ground. Do not short between C701 and C702. It may damage the capacitors.

2. After completion of repair, slowly apply the primary voltage by using a variac to avoid over current. Current consumption at 50Hz/60Hz in no signal mode should by shown with respect to supply voltage 220V.

Power supply voltage		AC 220V
Consumed current	50/60Hz	170~370mA

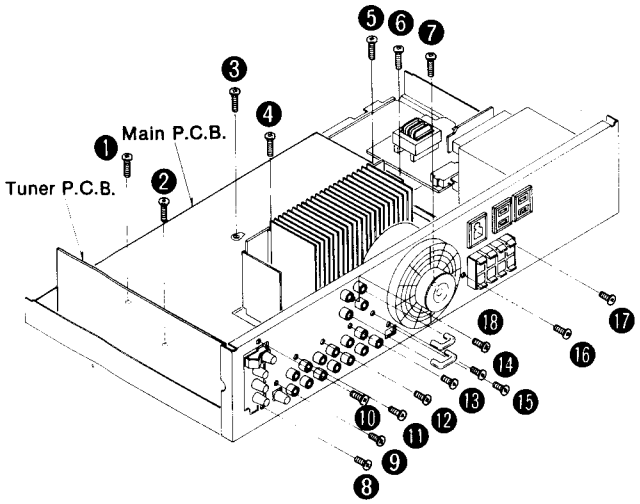
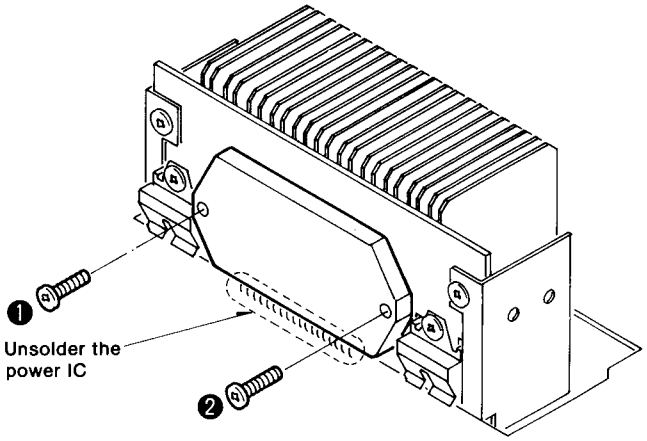
Ref. No. 5	How to remove the tuner P.C.B. and main P.C.B.
Procedure 1→2→5	1. Remove the 18 screws (❶~⑱). 2. Remove the tuner P.C.B. and main P.C.B.



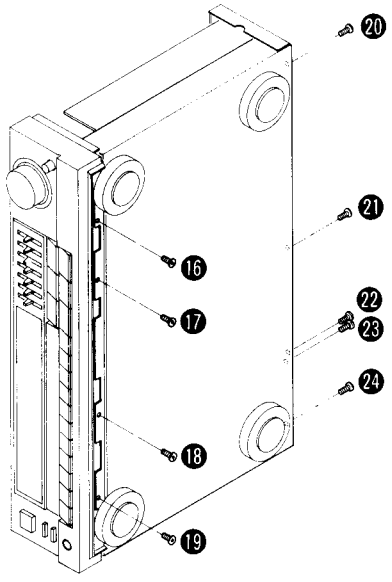
Ref. No. 6	How to remove the power IC
Procedure 1→2→5→6	1. Unsolder the power IC. 2. Remove the 2 screws (❶, ❷).

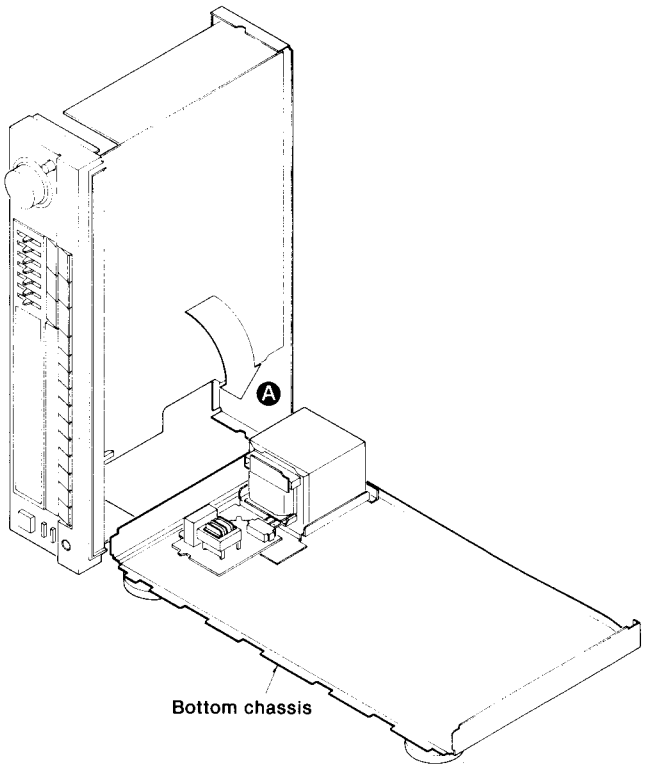


Note: When mounting the power IC, apply silicon terminal compound (SZZ0L15) to the rear of the power IC.

How to check the main P.C.B.

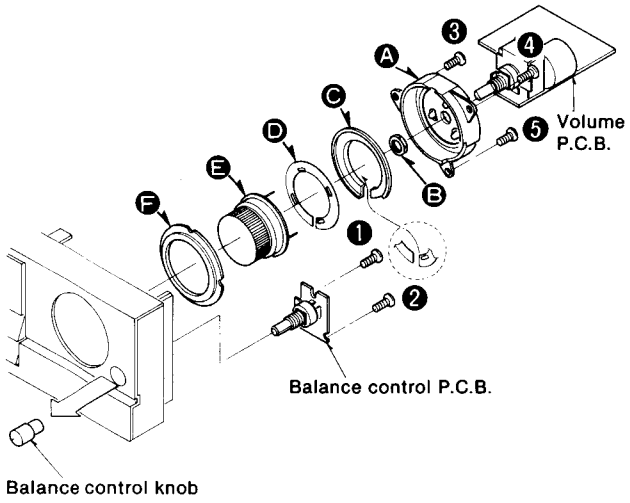
1. Remove the 7 screws (❶~❼) in above figure.
2. Remove the 9 screws (⑯~㉔).
3. Remove the bottom chassis in the direction of the arrow (Ⓐ).





D

Ref. No. 7	How to remove the balance control P.C.B. and volume P.C.B.
Procedure 1→2→4→7	1. Remove the balance control knob. 2. Remove the 2 screws (❶, ❷). 3. Remove the balance control P.C.B. 4. Remove the 3 screws (❸~❺). 5. Remove the volume P.C.B.

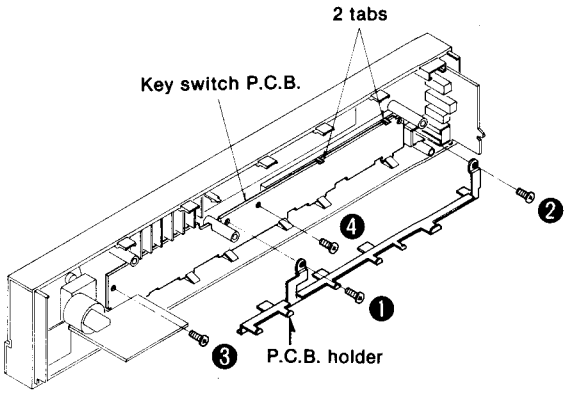


Mounting main volume control

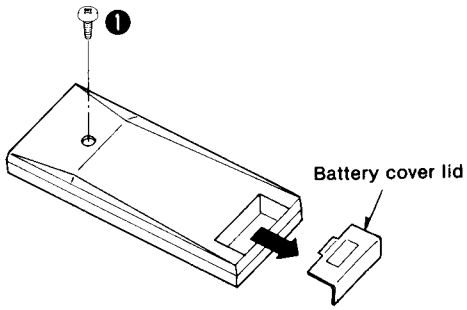
1. Insert the motor volume shaft into volume base (Ⓐ) and secure it with nut (Ⓑ).
2. Insert the shatter plate (Ⓓ) into volume knob (Ⓔ), then mount the volume light guide (Ⓒ), volume knob, and volume ring (Ⓕ) on the volume shaft.

Note: Slip one end of the shatter plate inside the volume light guide.

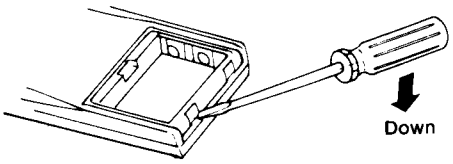
Ref. No. 8	How to remove the key switch P.C.B.
Procedure 1→2→4→8	1. Remove the 2 screws (❶, ❷), and remove the P.C.B. holder. 2. Remove the 2 screws (❸, ❹). 3. Remove the 2 tabs. 4. Remove the key switch P.C.B.



Ref. No. 9	How to disassemble the remote control
Procedure 9	1. Remove the Battery cover lid. 2. Remove screws ❶.



3. Insert a flat blade screwdriver between the upper and lower covers inside the battery compartment and then slowly loosen the bottom cover.



■ MEASUREMENTS AND ADJUSTMENTS

■ FM

Control positions and equipment used

- FM signal generator (AM and FM-SG).
- Stereo modulator
- Distortion analyser
- Oscilloscope
- AC and DC electronic voltmeter (EVM)
- Frequency counter
- Resistor (100kΩ)

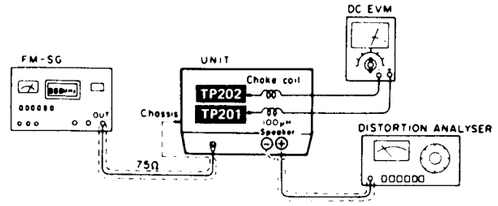
Note: For **Z201, Z202, Z321, L321, L322** and **L324**, adjusted parts are supplied. So, do not turn the cores of these parts.

FM MONO DISTORTION ADJUSTMENT

1. Test equipment connection is shown in figure.
2. Set the unit to "**FM**" position.
3. Set the radio frequency display and signal generator to **100.10MHz.**
4. Adjust **T201** core so that voltage measured in signal mode is **0mV** (0±20mV) in **300mV** range.
5. Adjust **T202** so that the distortion factor of Lch is minimized.
6. Repeat steps 4 and 5 a few times.
7. Make sure that the distortion factors of Lch and Rch are nearly the same with each other to minimum.

Note:
The adjusting screwdriver used should be made of resin.

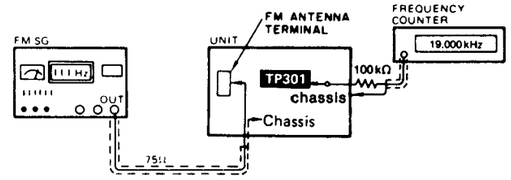
FM SIGNAL GENERATOR CONDITION
Modulation.....100%
Modulation frequency.....1kHz (MONO)
Output level.....66dB



MPX VCO ADJUSTMENT

1. Test equipment connection is shown in figure.
2. Set the unit to "**FM auto**" position.
3. Place the radio frequency display and signal generator to **100.10MHz.**
4. Adjust **VR301** for **19.00±0.03kHz** on frequency counter reading.

FM SIGNAL GENERATOR CONDITION
Modulation.....0% (non-modulation)
Output level.....66dB



★USING ALTERNATE SYSTEM

1. Apply stereo signal from generator or receive the stereo broadcast.
2. Adjust **VR301** until stereo indicator lights up. Cement arm of **VR301** as shown in figure.

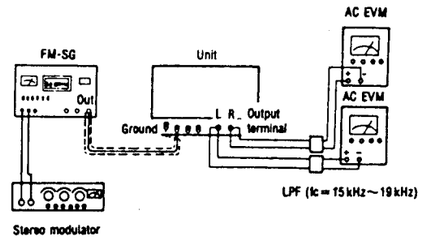
FM STEREO SEPARATION ADJUSTMENT

1. Test equipment connection is shown in figure.
2. Set the unit to "**FM**" mode.
3. Set the radio frequency display and signal generator to **100.10MHz.**
4. Adjust **VR302** so that the R-CH output is minimized when stereo modulator is in "L"(L-CH modulation) mode.

FM SIGNAL GENERATOR CONDITION
Modulation.....Stereo "L" mode or "R" mode 90%, Pilot 10%
Modulation frequency.....1kHz (Pilot 19kHz)
Output level.....66dB



FM STEREO DISTORTION ADJUSTMENT

1. Test equipment connection is shown in figure.
2. Set the unit to "**FM**" mode.
3. Set the radio frequency display and signal generator to **100.10MHz.**
4. Adjust **L1** so that the distortion factor of L-CH is minimized.
5. Make sure that the distortion factors of L-CH and R-CH are nearly the same with each other to minimum.

Notes:
1. The adjusting screwdriver used should be made of resin.
2. **L1** should be rotated no more 1/4 turn (90 deg.) on either side.

FM SIGNAL GENERATOR CONDITION
Modulation.....Stereo "L" mode or "R" mode 45%, Pilot 10%
Modulation frequency.....1kHz (Pilot 19kHz)
Output level.....66dB

■ RESISTORS & CAPACITORS

Notes : * Important safety notice :
Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.
* Bracketed indications in Ref. No. columns specify the area. (Refer to the first page for area.)
Parts without these indications can be used for all areas.

■ REPLACEMENT PARTS LIST

Notes : * Important safety notice :
Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.
* Bracketed indications in Ref. No. columns specify the area. (Refer to the first page for area.)
Parts without these indications can be used for all areas.

  - : Phono signal
  - : Positive voltage lines
  - : Negative voltage lines
- Important safety notice:
  Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts. Indicated voltage values are standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on internal impedance of the DC circuit tester.
- All voltage values shown in circuitry are DC voltage in FM signal (Stereo signal) reception mode.

* Figures in ( ) Stand for DC-voltage in AM signal reception mode

* **Caution**!
IC and LSI are sensitive to static electricity.
Secondary trouble can be prevented by taking care during repair.

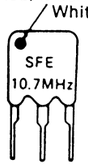
* Cover the parts boxes made of plastics with alminum foil.
* Ground the soldering iron.
* Put a conductive mat on the work table.
* Do not touch the legs of IC or LSI with the fingers directly.

Note2:

• Use of ceramic filters in pairs

The ceramic filters (CF201, CF202) for FM-IF circuit are available in three ranks. For this circuit, be sure to use the ceramics of the same rank in a pair.
At repairing and replacement, pay close attention to the diodes (D914, D915) for use as different diodes must be used depending on each rank of the ceramic filters.

Color marking (Red, Black or White)



RANK (Color)	D914	D915	CENTER FREQUENCY
Black	○	×	10.65MHz
Red	×	×	10.70MHz
White	×	○	10.75MHz

Note: ○ mark: Diode is used.
× mark: Diode is not used.
